

USAID's REINFORCE BASIC HEALTH SERVICES PROJECT

HEALTH FACILITIES & READINESS SCORES

Average readiness scores for community health centers (CHCs) and the hospital improved

The average readiness score across Covalima community health centers and the hospital improved

FROM 68% TO 85% BY ENDLINE

The overall service readiness scores across the five domains for all Covalima facilities, including health posts, show an increase

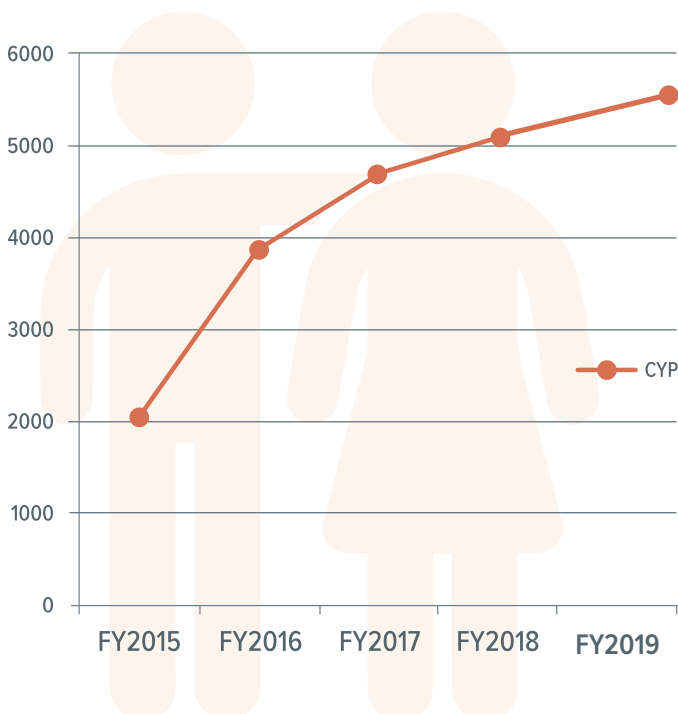

FROM 51% TO 69%

*Service Availability Readiness Assessments 2015, 2020

FAMILY PLANNING

Couple Years of Protection Increased Every Year

100% OF FACILITIES

now offer reversible contraceptives, and access to a wide range of contraceptive methods improved between baseline and endline.

Contraceptive choice increased significantly, and at endline **100% of the 7 community health centers offered all 7 reversible methods**. E.g., at baseline Depo Provera was available at **30%** of community health centers; at endline it was available at **100%**. Condoms, implants, IUDs, and cycle beads all became significantly easier to access across Covalima.

USAID
FROM THE AMERICAN PEOPLE

CHILD HEALTH

87%

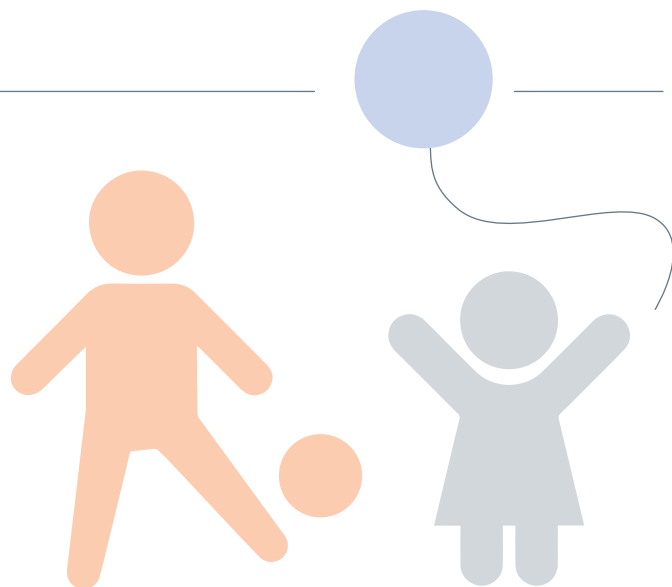

OF FACILITIES
offer immunization
services, up from

54%

AT BASELINE

100%

OF FACILITIES
have trained staff to deliver
integrated management
of childhood illnesses
(IMCI), greatly improving
diagnosis and treatment
for several childhood
diseases.

MATERNAL HEALTH

Facility-based deliveries increased from

8% TO 22%

IN COMMUNITY HEALTH CENTERS

Facility-based deliveries increased from

32% TO 40%

IN THE HOSPITAL

This reverses the preference for home-based deliveries found during the baseline knowledge, attitudes, and practices (KAP) survey.

The endline KAP survey indicated a statistically significant increase in women who think birth spacing of more than 3 years is ideal (from **27%** to **49%**).

IMPROVING HEALTHY BEHAVIORS

REACHED

122

COMMUNITIES

with health-related information via discussion groups, films, public service announcements, and other social and behavior change efforts.

A new **adolescent reproductive health curriculum**, designed and tested by the MOH with youth participation, was piloted in four additional municipalities and then **approved in 2020**.
