Project Objectives

The USAID-funded Asia Resilient Cities (ARC) Project will address cross-cutting urban development challenges in secondary cities in Asia by promoting sustainable urban growth; supporting resilient, low-carbon urban infrastructure; and integrating climate change and environmental considerations into urban approaches. Led by JSI, the ARC consortium includes BRAC, DevTech Systems, Inc., and ICF.

ARC will use sustainable and participatory approaches to help cities fulfill their goals. To that end, we will connect city residents, governments, and other stakeholders, creating relationships that will continue past the end of this project. We will partner with cities and their residents to create more resilient and livable environments in the face of shocks, and co-design approaches that support sustainable urban growth and integrate climate change considerations.
